

Ahyan Mehta

ahyan.mehta@ontariotechu.net | (647)-573-7590 | LinkedIn: [Ahyan Mehta](#) | GitHub: [Ahyan-M](#) | [Portfolio](#)

SKILLS

Programming: Java, Python, JavaScript, HTML/CSS, Tailwind & C++

Tools/Frameworks: PyCharm, Jupyter Notebooks, Git, React, Microsoft Office, Scikit-learn, Flask & Pandas

EDUCATION

Ontario Tech University

Oshawa, Ontario

B.S. in Computer Science

Expected Graduation, May 2028

- **GPA: 3.55/4.3**
- **Technical Focus Areas:** Data Structures & Algorithms, Objects & Design, Computer Organization, API Integrations & Object-Oriented Programming

EXPERIENCE

Vosyn AI

Toronto, Ontario

Frontend & UX Engineering Intern

September 2025 – December 2025

- Designed and refined user-facing web and mobile interfaces, applying HTML, CSS, and JavaScript knowledge to ensure responsive and accessible designs.
- Collaborated with product managers, designers, and developers to translate Figma prototypes into functional, scalable front-end components.
- Conducted user research and usability testing to inform and iterate on wireframes, prototypes, and mockups, ensuring design decisions improve overall user experience.
- Contributed to the design system and style guide, maintaining visual consistency and seamless integration across platforms.

PROJECTS

AI Resume Optimization App

Oshawa, Ontario

Personal Project

March 2025 - August 2025

- Developed a full-stack SaaS platform to optimize resumes using ATS scoring algorithms, increasing match accuracy by up to **30%** per resume through intelligent keyword insertion and real-time analysis, with **20** active users.
- Engineered Flask APIs with parallel processing, retry logic, and circuit breakers, handling up to **10** concurrent optimizations and reducing average processing time to **2.5 seconds**.
- Implemented user authentication and job tracking using Supabase, allowing for a seamless integration of real-time dashboards and long-term storage of resume/job data with **99%** uptime.
- Designed and built a clean, professional multi-page React frontend with Tailwind CSS, focusing on a minimalistic UI, smooth UX, dark mode, accessibility, and full mobile responsiveness.

Machine Learning Model

Oshawa, Ontario

Personal Project

January 2025 – April 2025

- Built a machine learning model using Python, NumPy, Pandas, and scikit-learn to predict Premier League match outcomes with a **68%** accuracy rate.
- Performed data preprocessing and feature engineering on historical match data to enhance model performance.
- Applied logistic regression for multi-class classification of home win, draw, and away win outcomes, optimizing model parameters to improve predictive power by **15%**.
- Evaluated model with confusion matrix and accuracy, refining features to reduce bias.

YouTube Chrome Extension

Oshawa, Ontario

Personal Project

December 2024 - February 2025

- Built a Chrome extension using JavaScript, HTML, CSS, and Manifest V3 to help users stay focused on YouTube by hiding distractions such as the sidebar, comments, and like/dislike bars.
- Designed customizable preset modes and a timer-based auto-disable system using modular configuration logic to support structured productivity cycles, including Pomodoro sessions.
- Built an analytics dashboard with content scripts, Chrome Storage API, and Mutation Observers to track key engagement metrics, including session duration, completion rates, and daily streaks.
